

- Treats nail fungus
- With breathable nail polish
- Camouflages any unsightly discoloration or damage caused by infected nails

Purpose for use

Nailner Treat & Colour has been specially developed for nails suffering from nail fungus. Nailner Brush treatment treats and prevents nail fungus infection.

This product includes:

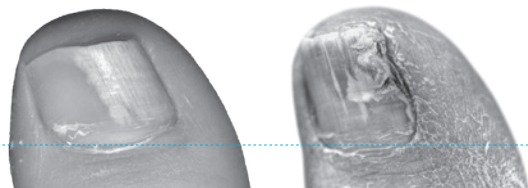

1. **Nailner Brush treatment:** Easy-to-apply solution that penetrates the nail and treats infection.
2. **Nailner Breathable Nail Polish:** Colours the nails to hide discoloration and damage caused by infection.

What is fungal nail infection?

Also known as onychomycosis, fungal infection affects the toenails and/or the fingernails. It is an unsightly, potentially painful and infectious problem that can be transmitted from one person to another.

Fungal infections are the most common cause of diseased nails:

- Approximately 50% of nail abnormalities are caused by fungal infections.
- 6-8% of adults suffer from fungal nail infections.
- Risk increases with age to 15-20% amongst 40-60 year olds.

A fungal nail infection may begin as a discoloured (white or yellow) spot under the tip of your toenail and/or fingernail. As the fungus spreads deeper into the nail, it may cause the nail to discolour, thicken and deteriorate with crumbling edges.

How does Nailner work?

Nailner Brush treatment formula is clinically proven to treat and prevent fungal nail infection effectively thanks to a unique combination of ingredients.

Nailner Brush treatment fights fungal nail infection in three ways:

- Penetrating the nail: unique ingredients saturate the nail and combat the fungus at its core
- Removing the infection: by lowering the nail's pH level, Nailner restores its healthy environment and kills fungus.
- Preventing new infection: Nailner protects the newly grown nail from infection when applied as daily maintenance.

Nailner Breathable Nail Polish: Nailner Breathable Nail Polish disguises unsightly damage with an attractive natural looking colour, making it an ideal solution for wearing open shoes. This breathable formula can be used on all nails, infected or healthy.

Instructions for using Nailner Treat & Colour:

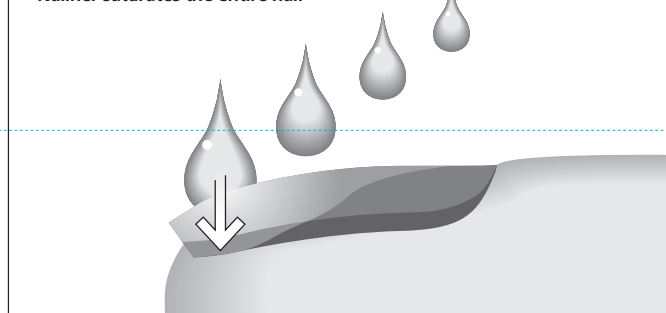

Nailner Treat & Colour should be applied in the following way:

- **Step 1:** Apply Nailner Brush treatment to the infected nail. It can also be applied to all nails to prevent infection (bottle with transparent liquid)
- **Step 2:** When desired, paint the nails with Nailner Breathable Nail Polish to camouflage unsightly infection and enjoy attractive nails (bottle with coloured liquid)

Detailed instructions:

1. **Before each application remove nail varnish from the nails that need to be treated.**
2. Apply Nailner Brush (transparent liquid) to the entire surface of the infected nail, including the underside of front edges.

Nailner saturates the entire nail

3. Let the solution dry for 1-2 minutes
4. Paint the nails with Nailner Breathable Nail Polish and allow to dry (normally 2-3 minutes). All nails can be painted.
5. Before next application, remove nail polish with nail polish remover (preferably without acetone) from the nails that need to be treated and repeat the process above. The healthy nails can remain painted (recommended to clean and let nails breathe every 2 weeks).

How often should Nailner Brush treatment be applied?

Nailner Brush treatment should be applied twice daily for the first four weeks of use. After four weeks, the application can be reduced to once daily until the infected part of the nail has grown out. Nailner Brush treatment contains sufficient solution for approximately 300 applications.

Nailner Brush treatment can also be used preventatively. Apply Nailner Brush once a day to prevent fungal infection of the nails. Nailner Breathable Nail Polish can be used whenever it is desired to camouflage the unsightly nails or have the nails coloured. Nailner Breathable Nail Polish contains approximately 250 applications.

Warnings & contraindications:

For external use only. Keep out of reach of children. Avoid contact with eyes or mucosa. In case of contact with eyes, rinse cautiously with water for several minutes. Consult a doctor if your condition persists or worsens. May cause irritation if applied to damaged skin. Do not expose the treated area to direct sunlight after application. Discontinue use in the event of an allergic reaction or irritation, and seek medical advice. Do not use the product if you are allergic to any of the ingredients. Consult a doctor if you are diabetic or suffer from poor circulation.

Storage:

Store at room temperature. Flammable. Avoid inhalation.
